

# Gotek Telecom

## Introduction to Gotek Telecom Company Profile

# Gotek Introduction

## Description

Gotek is a Mobile Virtual Network Enabler (MVNE) that offers a vertically integrated Network-as-a-Service platform and global connectivity service.

We deliver a global wireless network and infrastructure to customers, with every component of service, technology & management. Thus, providing access to every network in the world with redundant, high-performance, quality coverage.

**We Simplify Global Roaming**

# What is Gotek Plus ?

Gotek Plus is a brand owned and operated by Gotek Telecom, that offers transparent connectivity solutions to travelers from all around the world. We help our users stay connected in 200+ countries and territories, providing the lowest rates. You Travel – We Connect !

**Internet Roaming SIM Card**

**eSIM Roaming Internet**

**Gotek Plus Mobile APP**

# What we offer

**TRANSPARENT, FLEXIBLE, AND  
REAL-TIME MANAGEMENT TOOLS**

**GLOBAL CONNECTIVITY  
PLATFORM**

**END-TO-END SOLUTION**

# About us

Gotek Telecom LTD is newly established telecom company, the result of more than 25 years of experience in Telecom. Our experience grew parallel to the telecom industry and information technology. Starting from international calling cards, international sim cards, VOIP, GSM Roaming, moving to the back-ends empowering MVNO / MNO companies with the latest telecom technology and partnering with telecom companies & groups gave us our edge to be the leaders in providing innovative telecom technology. As the telecom industry grows, we are part of it, pushing the technology and re-shaping it to fit the best customer experience, retail markets, and Wholesale with whitelabel solutions; the outcome of all this vast experience, Gotek Telecom LTD was established in 2020 to provide the latest telecom technology with the best quality and lowest prices.

**“We Simplify & Believe in a Global Borderless Telecom Network”**

# Vision and Mission

## Company Vision

Gotek emphasizes the growth of telecom to exceed its potentials, by innovating ideas and reshaping the telecom technology to provide a simple reliable solution for the end-user. Gotek believes in a borderless Global Telecom Network.

## Company Mission

Moving in parallel to the telecom industry Gotek Telecom innovates the latest technology to provide the best quality with the lowest prices, simplifying Telecom Technology for the end-user.

# History **Timeline**

**1996**

We started our experience with the old legacy telecom platforms to upgrade and introduce to the market, such as VOIP & International Calling Cards

**2006**

We kept on testing and experimenting with new telecom ideas turning the experience into telecom knowledge

**2010**

Turning our knowledge & ideas into a global market of telecom producing different products and services such as, Global Multi-DID numbers, International GSM Roaming SIM Cards, etc

**2014**

Combining our telecom knowledge with our innovation of products, we built a powerful reliable telecom network infrastructure

**2017**

We kept on advancing with the Telecom industry to reach a point of success enabling a powerful Telecom Hub & a Network Core

**2020**

Started Gotek Telecom in Canada using a reliable powerful infrastructure with a vast experience in telecom applications, simplifying solutions to the consumer

# Products & Services

End-User / Industrial level solutions & applications

# Our Services

## MVNO/MVNE

GoTek Telecom your global connectivity partner with true end-to-end solutions

## Internet SIM Cards & eSIM

universal SIM card / eSIM provides global, high-speed, multi-carrier 4G LTE and 3G data coverage for any IoT/M2M application.

## OEM & Wholesale

GoTek's eSIM iUICC solutions provide unparalleled flexibility and control through cloud-based management tools, centralized management of all devices with access to multiple rate sheets, real-time billing, and remote provisioning.

## IoT

GoTek Global enables connectivity and management for IoT devices. Our eSIM cloud-based technology makes IoT deployment process simple and efficient, delivering maximum value with customized solutions.

# Internet Roaming SIM Card

GoTek Telecom multi-IMSI network provides redundancy, coverage, and reliable local connectivity. The global decentralized network offers faster connection speeds and lower latency, while significantly reducing costs for high-volume data transfers. Save up to 90% on international data roaming. Stay Longer – Roam Faster.

**Coverage in 200+ Countries**

**High-speed 4G LTE and 3G  
Data**

**Better service and lower latency**

**Real-time, OTA SIM  
provisioning**

# eSIM Profile

## Description

Scan a QR Code and receive a SIM profile over the air and Connect to local networks around the world with no physical SIM card required.

Access the safest and fastest networks without SIM cards

Switch between home carrier and other networks instantly

Stay in control of your data usage costs- no contracts needed

eSIM is an electronic SIM that allows you to activate a cellular plan without having to use a physical SIM card. It allows users to access their SIM profile over the air (OTA) and connect seamlessly to local networks around the world. It is delivered to the subscriber's device by scanning a QR code.

Check [Website](#) for eSIM compatible phones

# IoT Connect

**The only enterprise-grade, multi-modem, multi-IMSI eSIM router that comes out-of-box with global 4G LTE connectivity.**

Flexible modular configuration—up to 4 multi-band modems

Load-balanced and bonding-capable

Global band coverage

Compatible latest generation (Cat 4, Cat 6, Cat 11, Cat 12, Cat M1, etc.)

Customized connectivity solutions are available

Complete cloud-based OTA management and control

Location tracking—GPS optional

# IoT Connect

**High-bandwidth, global connectivity eSIM router for your enterprise needs**

## Fully Reliable

- ❖ Regardless of location, you can connect to a network that services that area
- ❖ Multi-carrier support for diverse redundancy

## Easy to Manage

- ❖ Cloud-based management tools
- ❖ SIM-free devices managed remotely

## Affordable

- ❖ By pooling bandwidth, you can enjoy optimum data rates
- ❖ Consumption-based rates—only pay for what you use

# Benefits GoTek IoT Platform Offers

## Flexible Business Model

GoTek Telecom cloud platform for IOT and M2M can be fully deployed in short time, with no capex cost. We offer flexible pricing structures, one simple invoice for all connected devices. There are no activation fees and all data consumption is usage based. This helps you to reduce implementation costs and optimize ROI for all your IoT projects.

## Easy to Manage

GoTek Telecom eliminates the hassle of working with multiple operators by providing a universal billing system with one management portal, one sim, one invoice, one global partner.

**We offer customized solutions for your IoT needs including connectivity, provisioning, monitoring and remote diagnosis. White-label solutions are also available and accompanied by a management app to support unique delivery mechanisms such as iUICC, eSIM, and SIM Sticker.**

## API-Based Solution

GoTek's end-to-end solution connects devices to your primary networks, while ensuring backup connectivity to secondary networks, and the flexibility to switch when necessary. We provide a scalable Network-as-a-Service (NaaS) platform, full flexible API Integration, and over-the-air remote SIM provisioning to leverage local network profiles for improved performance.

## Cloud Device Management

Our cloud-based and easy-to-use management portal allows you to manage, monitor and monetize all devices. Information can be viewed related to location, connection status, and real-time data usage. Customized packages and alerts can also be created for your IoT devices.

**MULTI-NETWORK GLOBAL  
CONNECTIVITY IN 200+  
COUNTRIES**

**ONE GLOBAL PARTNER, ONE  
SIM, ONE INVOICE, FOR THE  
ENTIRE WORLD**

**CLOUD MANAGEMENT  
PLATFORM, FLEXIBLE API**

**CONSUMPTION-BASED  
FLEXIBLE RATES**

**Gotek IoT Platform**

# Gotek Plus Mobile App

Simplifying what you need to run our service with ease, all in the convenience of an App. The App is customizable to have more features depending on the requirements. Some current features:

**View remaining Data usage**

**Purchase Data packages**

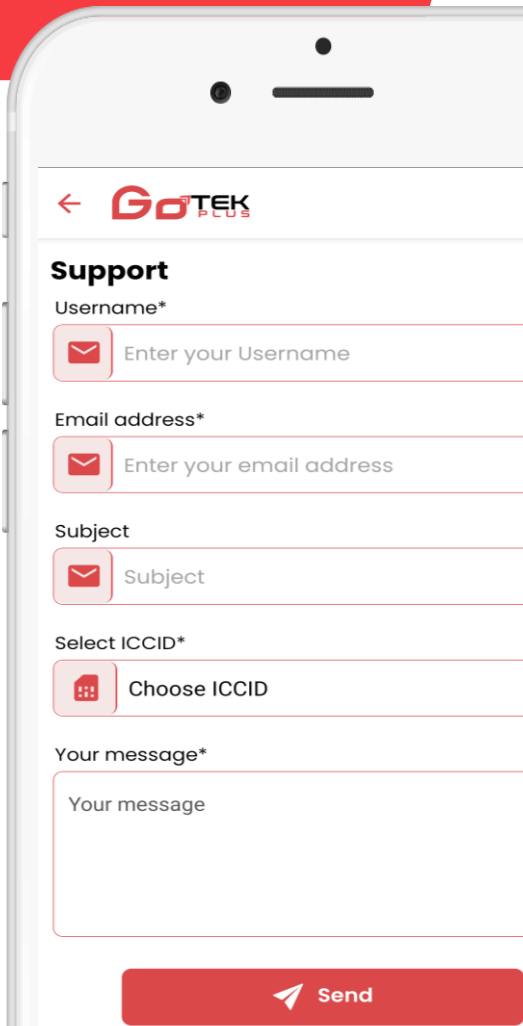

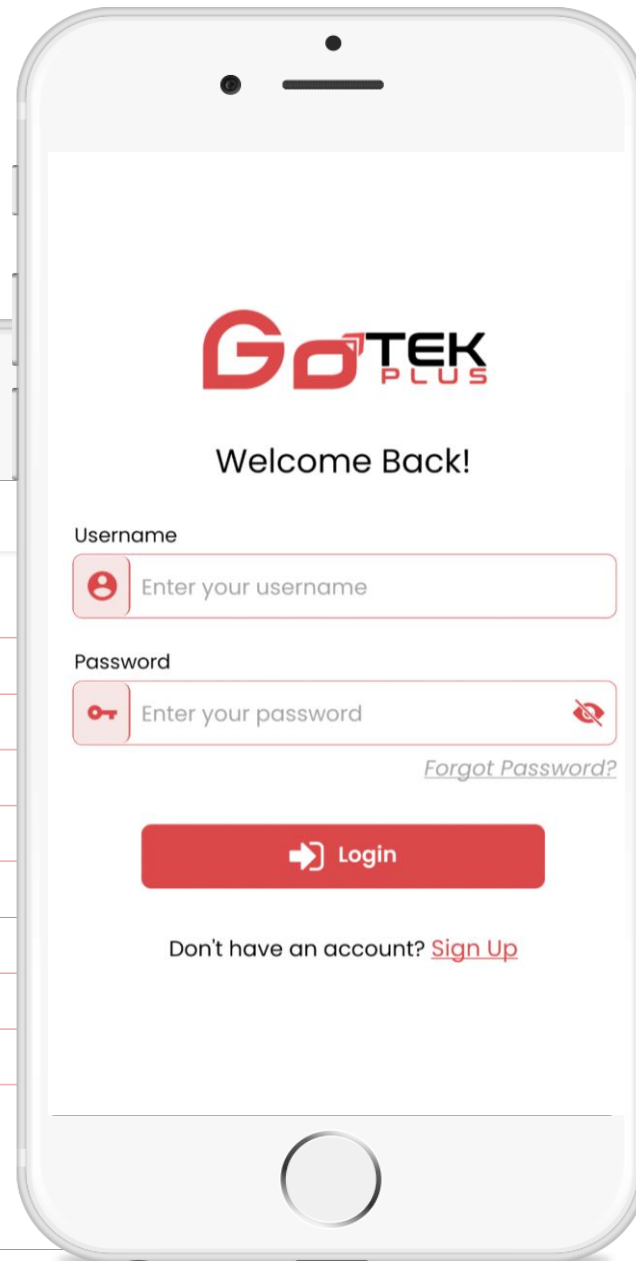

**Submit support ticket**

**View purchase transaction History**

**View / Add ICCIDs**

A person in a light-colored shirt is holding a tablet. The image is overlaid with a dark grey semi-transparent layer. On the left, there is a large red shape that tapers to a point. On the right, there is a white shape that tapers to a point. The text is centered on the dark grey area.

# OEM / Wholesale

Fast, flexible global connectivity and roaming services

Become our Network Partner

# OEM / Wholesale

## OEM

GoTek's eSIM iUICC solutions provide device-integrated global network connectivity and new revenue streams for Original Equipment Manufacturers (OEMs) and Module Vendors.

## Wholesale / Whitelabel

GoTek's white-label wholesale solutions for global connectivity offer customers the ability to provide international roaming solutions, and enable enterprise customers to launch IoT services locally, as well as globally.

# OEM Applications

1

## Global Connectivity

Access to GoTek's 800+ network agreements and 4G LTE/3G coverage in 200+ countries worldwide, ensuring redundancy and reliability.

2

## Full API

Extensive APIs for management of rate plans and network connectivity.

3

## Monitoring

Real-time monitoring systems with alerts, deep reporting, and analytics.

4

## New Revenue Opportunities

Diversifying and increasing recurring service revenues within the IoT/M2M markets.

5

## Flexible Provisioning

Flexible service provisioning, activation, and on-boarding. Seamless integration with no disruption for users and low upfront investment.

6

## Margin Share

Commercially generated revenue is shared with the device manufacturer, offering to enhance recurring income streams.

Out-of-box global connectivity for  
OEM and M2M/IoT vendors

# Benefits of Gotek's Whitelabel

## Redundancy and reliability

With access to multiple networks in each country, there are no single points of failure, assuring increased reliability.

## Seamless Integration

Dynamic network selection with on-demand, remote (over-the-air) provisioning of network credentials allows you to easily integrate with no disruption for end users and scale your business.

## Faster time to market

Through GoTek's multi-IMSI connectivity hub, customers can receive worldwide coverage in one single agreement, with the flexibility to switch between profiles.

## Delivery mechanisms

Flexibility to support all types of SIM cards, including eUICC, iUICC, eSIM, Programmable SIMs, and other innovative SIM card delivery mechanisms.

# Benefits of Gotek's Whitelabel

## Cloud-based platform

The management portal provides tools for customers to implement cost-management controls and use analytics to identify and respond to unusual device behavior in real time.

## Centralized billing & management

Management of all devices and connectivity agreements from one cloud platform. One invoice to track usage across all networks globally.

## Flexible APIs

The management portal is built with extensive Application Programming Interfaces (APIs) allowing customers to integrate features into their own applications.

## Robust, reliable global coverage

Multi-network connectivity in 200+ countries

# Flow of work process

**01** Project Discussion, Sign-off, Statement of Work

Design & Development

Ensuring the service is running seemingly, will be ready to launch **04**

**02** SIM Card, Website and Mobile App Design & Development

**Our wholesale solution is a high performance, value-added service that brings together connectivity and management in a single bundle**

# MVNO / MNO

GoTek Telecom your global connectivity partner  
with true end-to-end solutions

# International Roaming

GoTek creates opportunities, with disruptive business models, for MVNOs to easily enter the international roaming business, by combining:

**MULTI-IMSI HUB TECHNOLOGY**

**SOFTWARE-DEFINED NETWORK INFRASTRUCTURE**

**COMPLETE SUITE OF CLOUD-BASED MANAGEMENT TOOLS**

Choosing the right partner, with true end-to-end solutions, is the key factor for success.

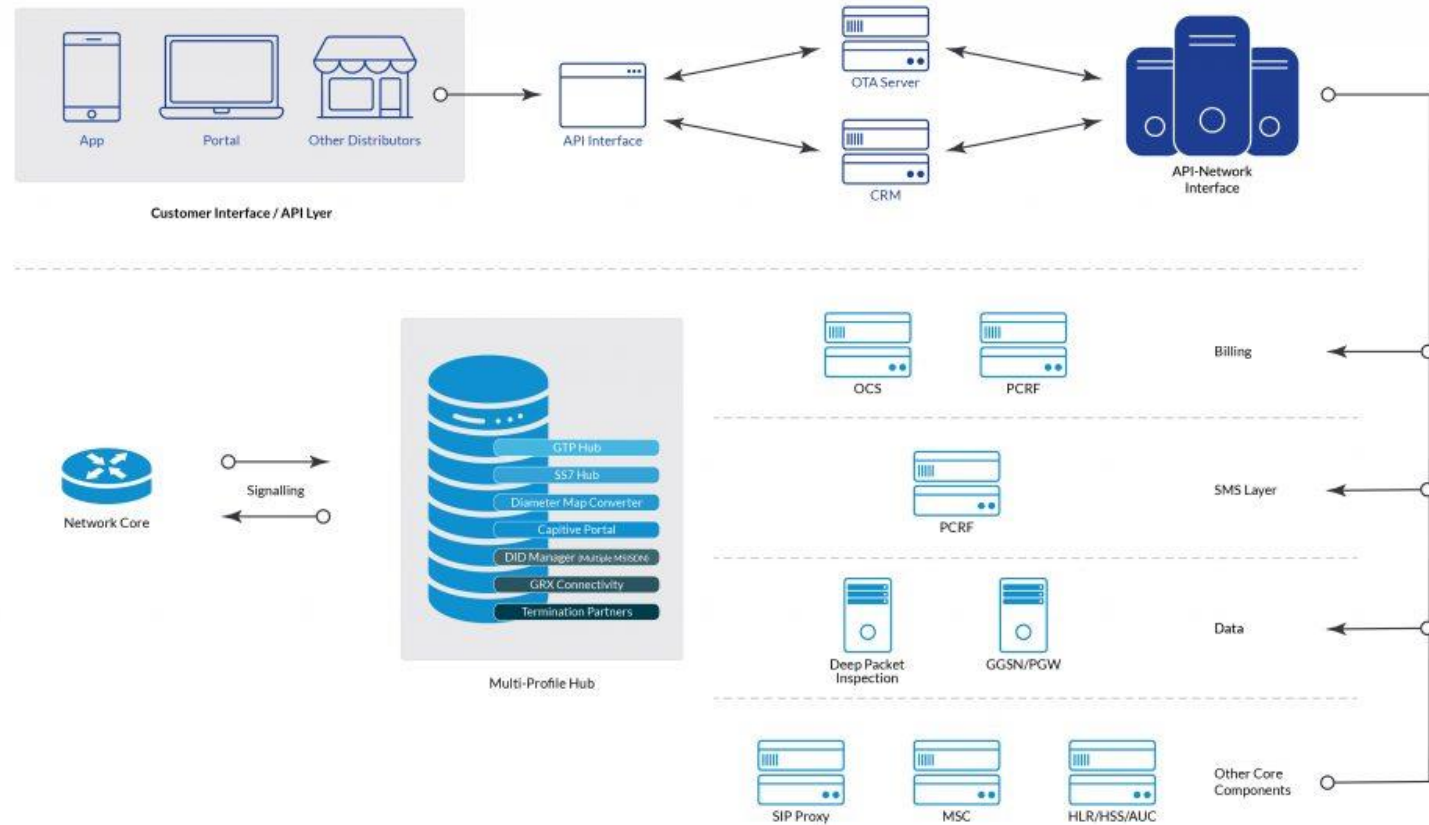

# Full MVNO Integration

GoTek Telecom creates opportunities, with disruptive business models, for MVNOs to easily enter the international roaming business, by combining:

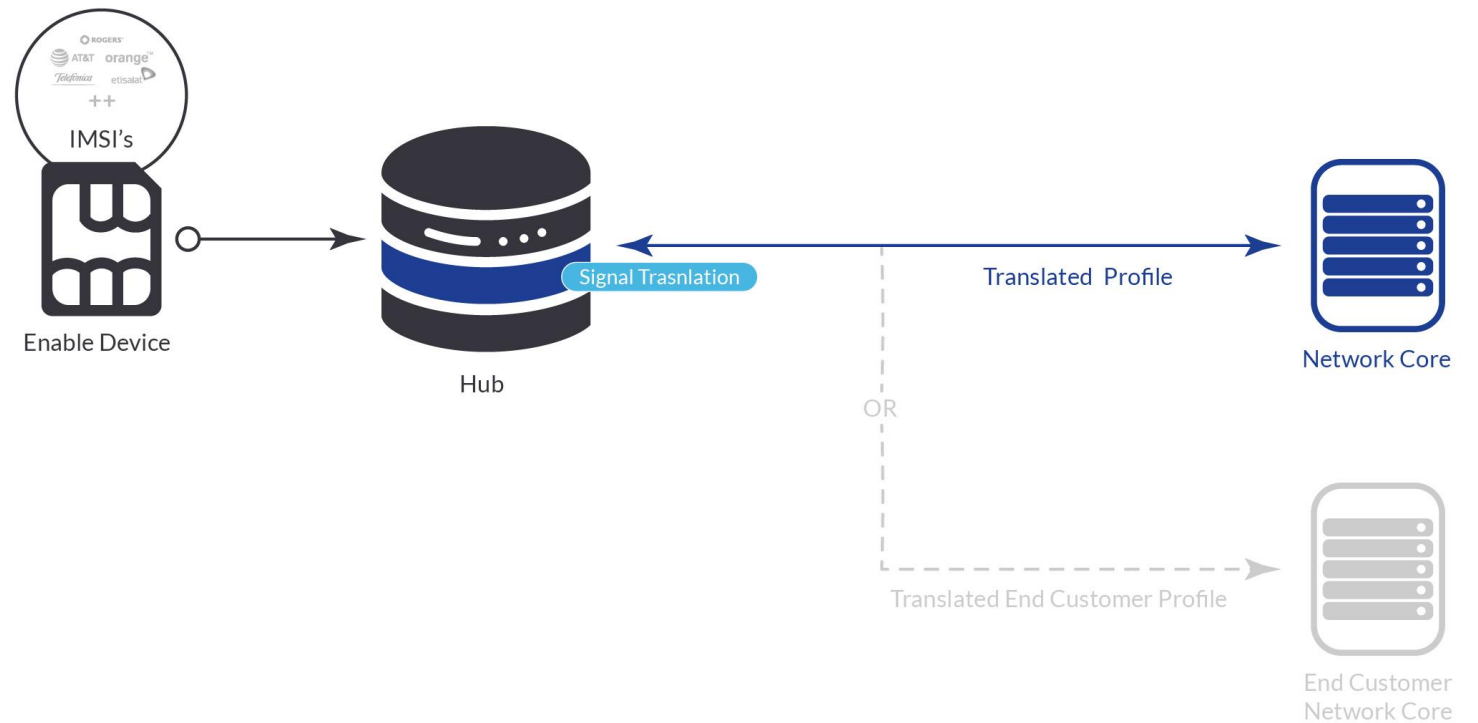

✓ Multi/Dual-IMSI offering integrated into the native SIM Cards

✓ Fully integrated connectivity into the MVNO core network

# Light MVNO Integration

- ✓ Profiles released to the MVNOs SIM vendor
- ✓ White label solutions with management app
- ✓ Fully virtualized core network, OSS/BSS to deliver Global Voice, SMS & data services
- ✓ Management is done through cloud portal or flexible APIs
- ✓ Scalable NaaS with immediate global connectivity
- ✓ Unique delivery mechanisms: iUICC supported OEM Devices, eSIM

# IoT / M2M Opportunities for MVNOs

High Bandwidth

- Wireless Office Connectivity
- Wireless LAN Back Up
- Digital Signage
- Video (Security)
- Residential Routers
- 3D Printing

- Video (Broadcast)
- Drone/UAV
- Automotive
- Autonomous
- Transportation Telemetry & Diagnostics
- Nautical / Airline / Railroad

Fixed Location

Variable Location

- Home Automation
- Industrial Internet
- Machines
- Energy/Smart Meters
- Robotics
- Municipal Apps
- Self-Service Solutions
- Parking Meters
- ATMs

- Consumer
- Wearables
- Healthcare
- Trackers
- Industrial
- AVL
- Pick Up and Delivery
- Module Sensor Arrays

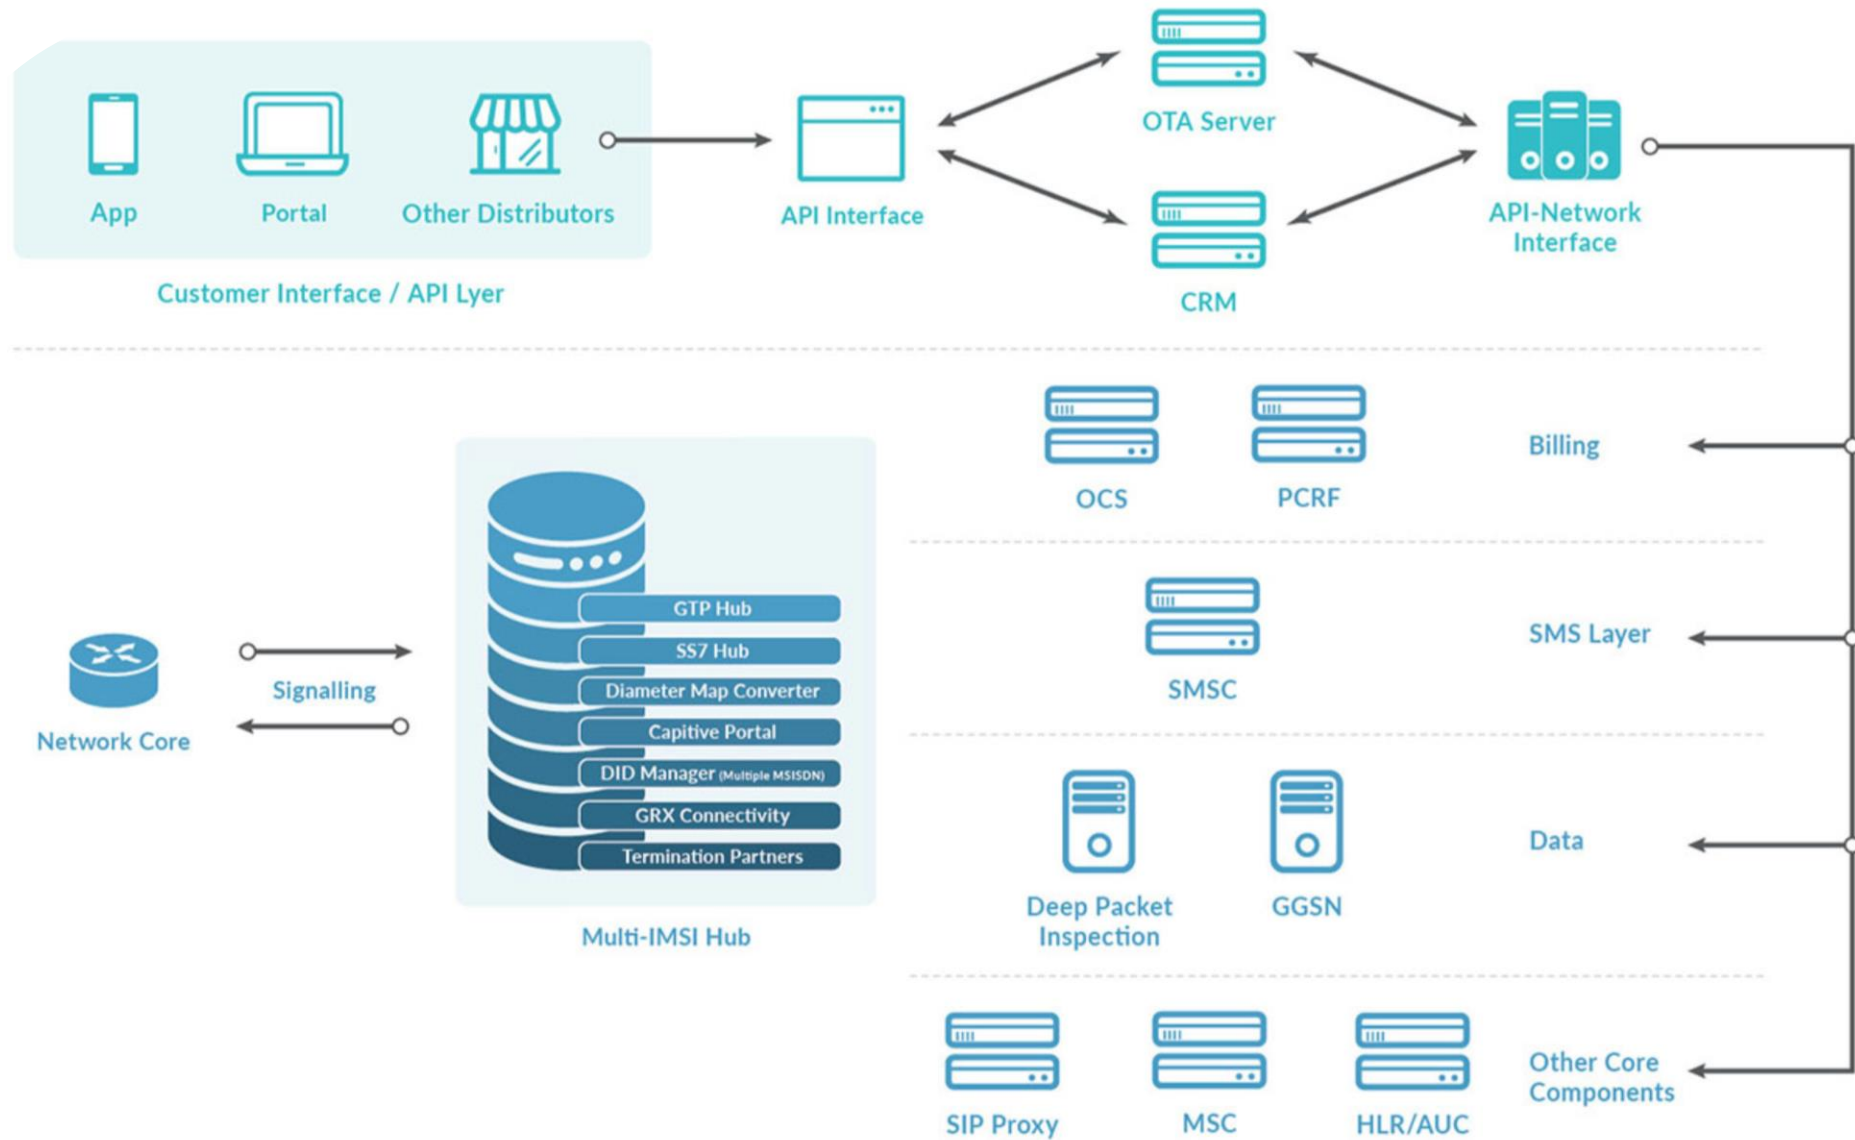

Low Bandwidth

# Gotek Telecom Network

Our Network Simplified

A hand in a dark suit jacket is pointing towards the center of the image. The background is a dark, semi-transparent overlay of various business and technical diagrams. These include a cloud computing diagram with a laptop and server icons, a circular flow diagram with 'Plan', 'Do', 'Check', and 'Act' stages, a bar chart with the word 'Success' above it, a lightbulb labeled 'IDEA', a pie chart with 'Team' and 'Target' labels, a network diagram with a central 'key' node and nodes A, B, C, D, E, F, and a diagram with 'Production' and 'Plan' labels. There are also various mathematical formulas and currency symbols like \$, €, and ¥ scattered throughout. The overall theme is business strategy and network connectivity.

# Network & Connectivity

**Network in a Box**

**Gotek's fully vertically integrated infrastructure enables out-of-the box connectivity for any service provider**

# Gotek operates a proprietary Multi-IMSI Connectivity Hub that ensures:

No single point of failure.  
Access to multiple networks in each country

Lowest prices by seamlessly accessing rates from network partners

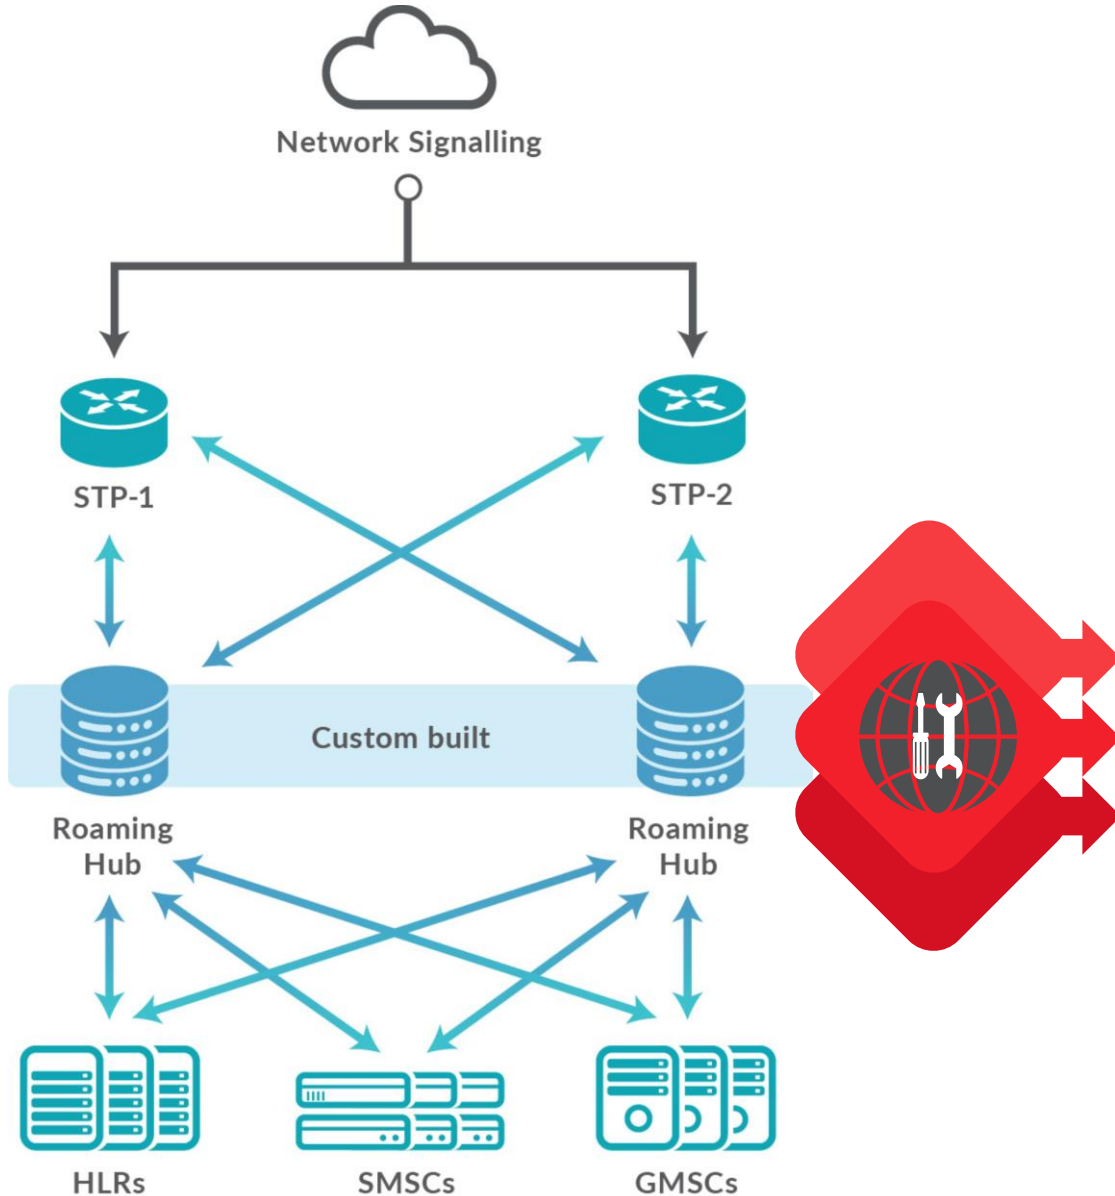

Supports dynamic network selection with remote on-demand provisioning (over-the-air) of network credentials

IP management, secure private access point name (APN) networks and virtual private network (VPN) connectivity to data center or cloud infrastructure

# Core network infrastructure (HLR-HSS, GGSN, OCS, PCRF, SMSC)

## Core Network Infrastructure

Gotek Telecom offers a managed, scalable & flexible Carrier-grade platform consisting of SCP, OCS, GGSN/PCRF, HLR/HSS, IN, VAS, OSS/ BSS that can be leveraged as per MNO/MVNO's requirements.

# Network Features

## **Gotek operates its own core network infrastructure similar to a Tier 1 operator.**

- ✓ Complete network core: HLR/HSS, GGSN, SMSC etc
- ✓ Data (2G/3G/LTE), Voice (Camel, USSD) & SMS
- ✓ Custom Billing Platform that supports multiple rate sheets
- ✓ Real-Time Billing (1KB increments, pre-paid and post-paid)
- ✓ Deep Packet Inspection (DPI) capabilities

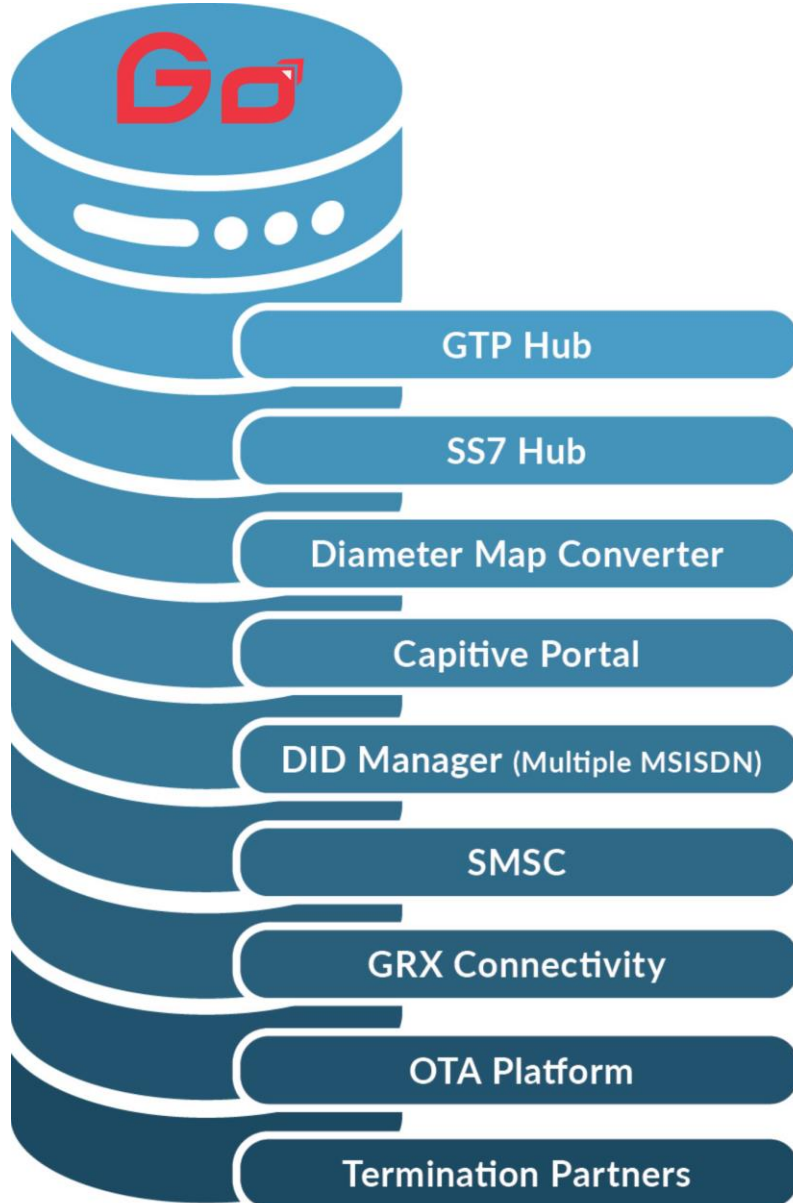

## **Extensive APIs give service providers network level control of the infrastructure**

- ✓ Real-time generation of CDRs, Location Updates and Data Sessions
- ✓ Ability to enable/disable and group SIMs based on billing needs

**Proprietary multi-IMSI Connectivity Hub provides access to multiple networks per country/region. System offers redundancy, coverage and reliability that is unmatched by a single-IMSI MNO**

# Connectivity Hub

**Gotek Connectivity Hub transforms any Single IMSI network into a scalable Multi-IMSI network**

Gotek Telecom offers a managed, scalable & flexible Carrier-grade platform consisting of SCP, OCS, GGSN/PCRF, HLR/HSS, IN, VAS, OSS/ BSS that can be leveraged as per MNO/MVNO's requirements.

# Features

**Signaling from all provisioned IMSIs is directed to the Gotek Connectivity Hub. The Hub translates the signaling into a single IMSI that is provisioned on the host HLR**

- ✓ From the perspective of the host network's core and billing platform there is only a single IMSI
- ✓ Allows for Multi MSISDN

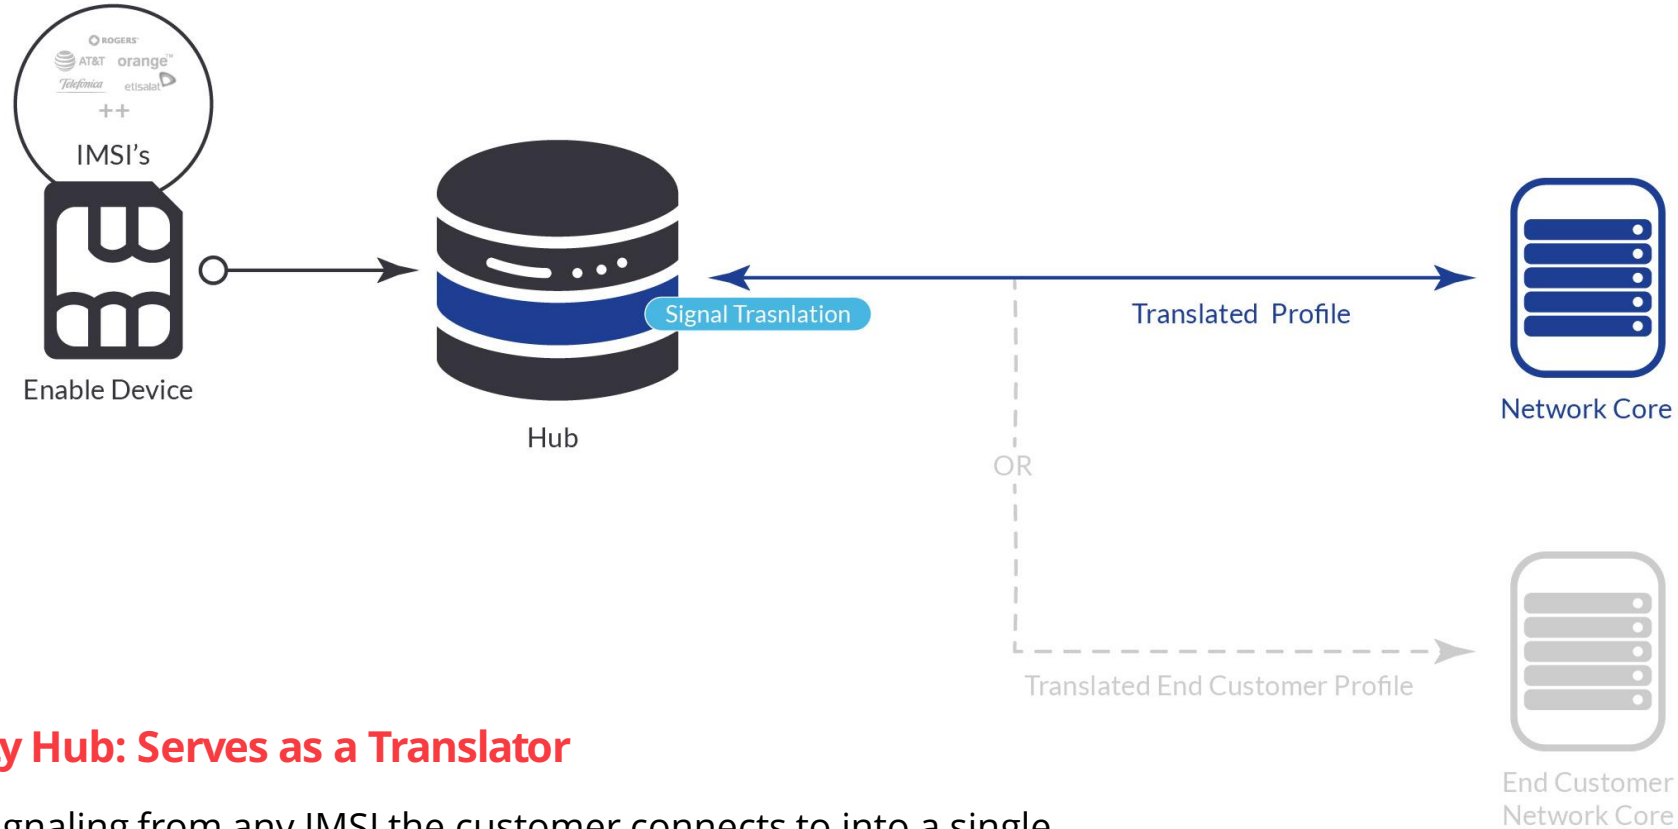

**End customer's network core does not need to keep track for multiple wallets and rate sheets attached to each IMSI**

- ✓ The Hub would translate all the traffic across various IMSIs to the end customer's single IMSI

**End customers can leverage our Connectivity Hub for customized network deployments due to separate translators for Voice, Data and SMS**

# Signal Translator

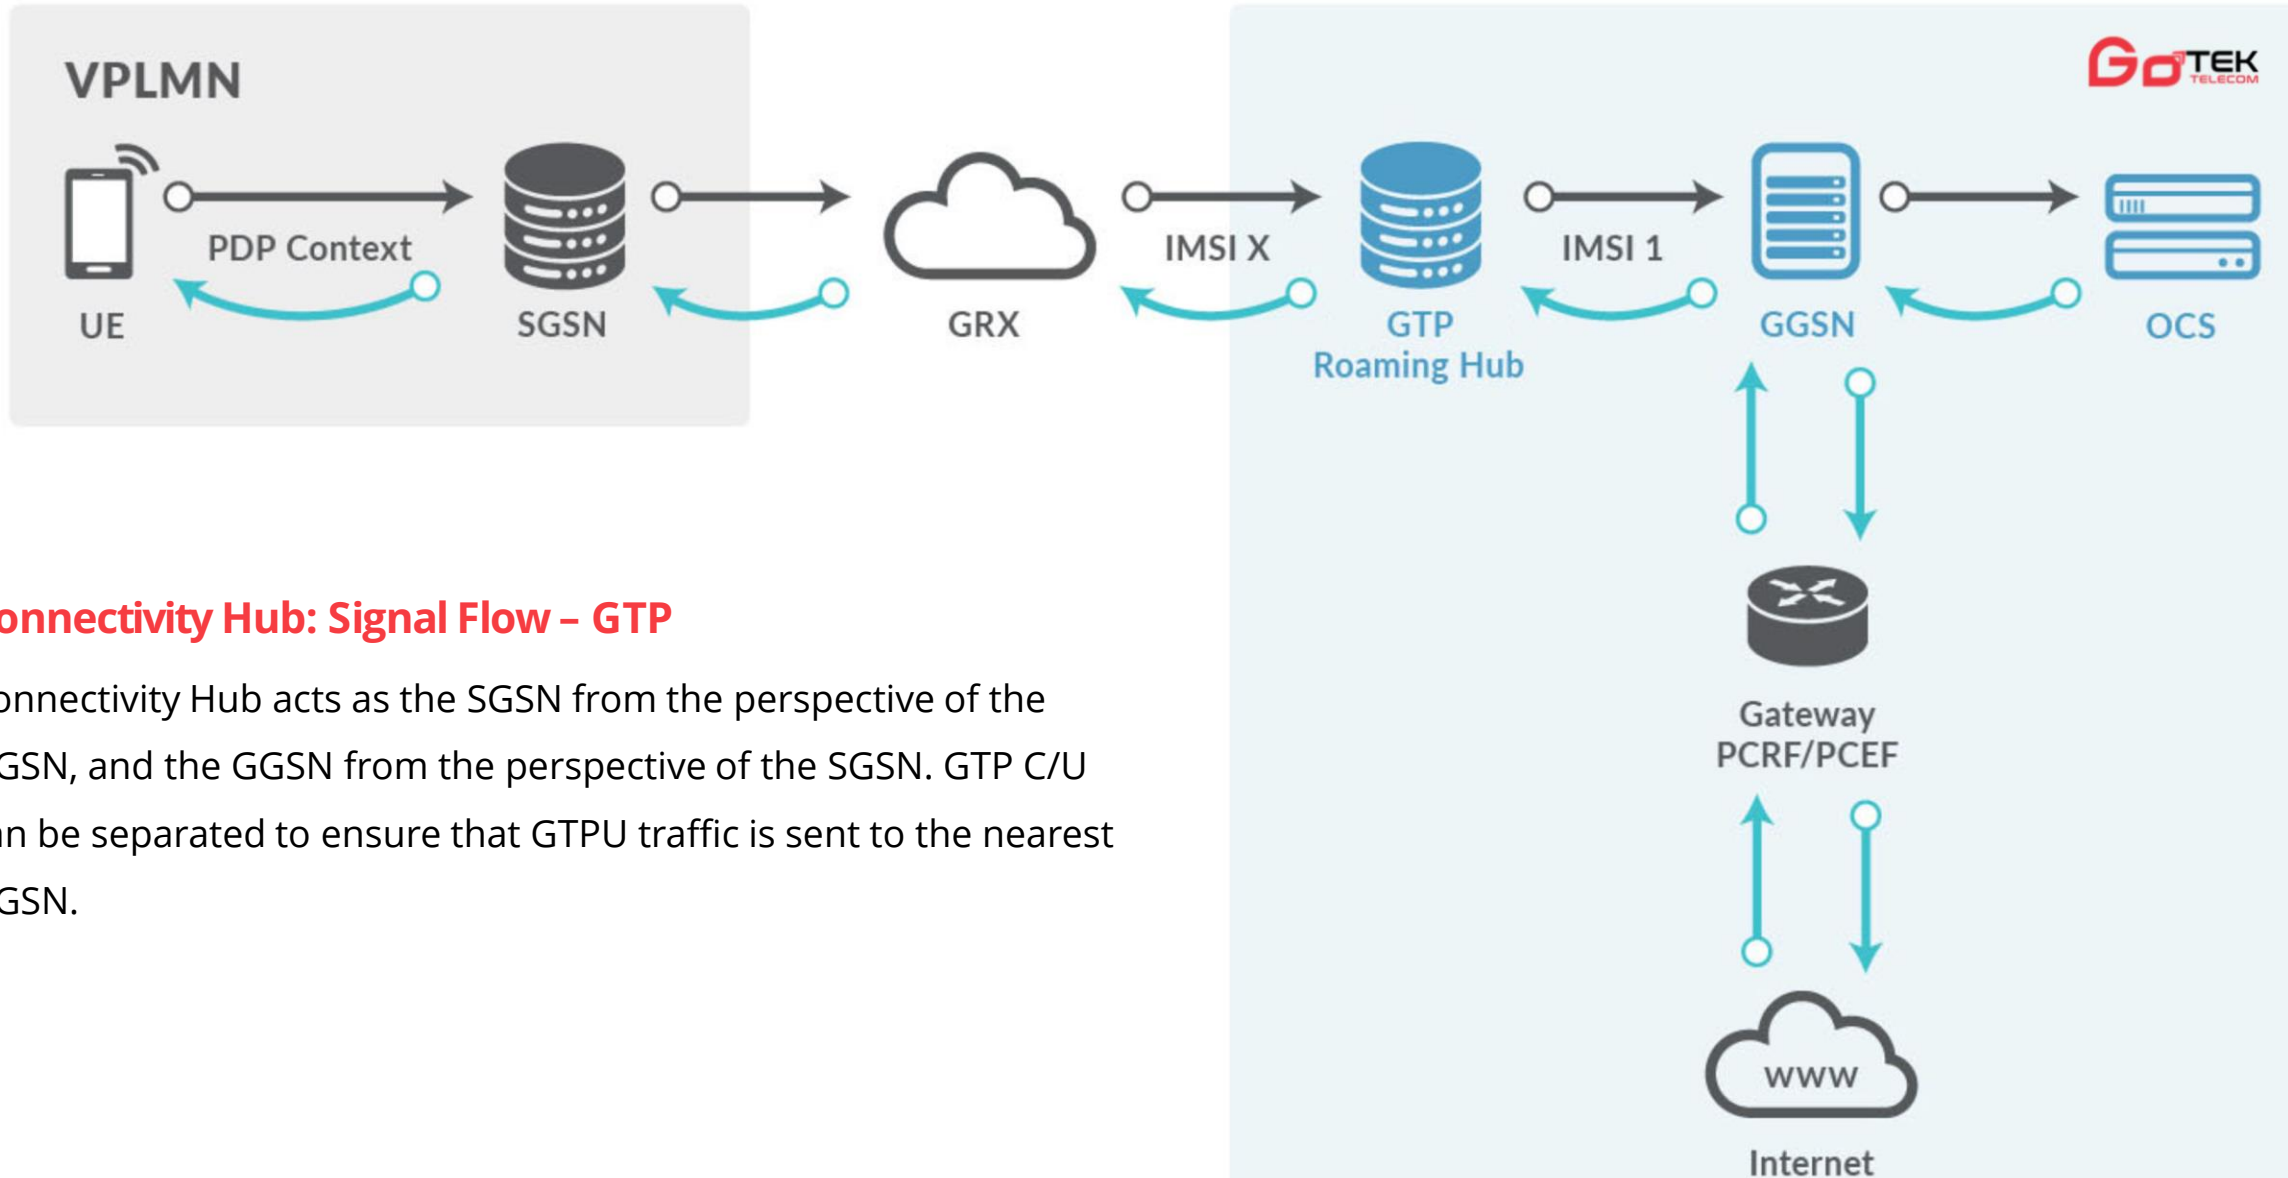

## Connectivity Hub: Serves as a Translator

Converting signaling from any IMSI the customer connects to into a single one that is mapped to their billing account

- ✓ Hub can send signaling to either Telna's core or another networks core
- ✓ Capability to mix-and-match core elements (Telna's HLR and customers GGSN or vice-versa)

# Signal Flow

## Connectivity Hub: Signal Flow – GTP

Connectivity Hub acts as the SGSN from the perspective of the GGSN, and the GGSN from the perspective of the SGSN. GTP C/U can be separated to ensure that GTPU traffic is sent to the nearest GGSN.

# GRX/IPX Connectivity

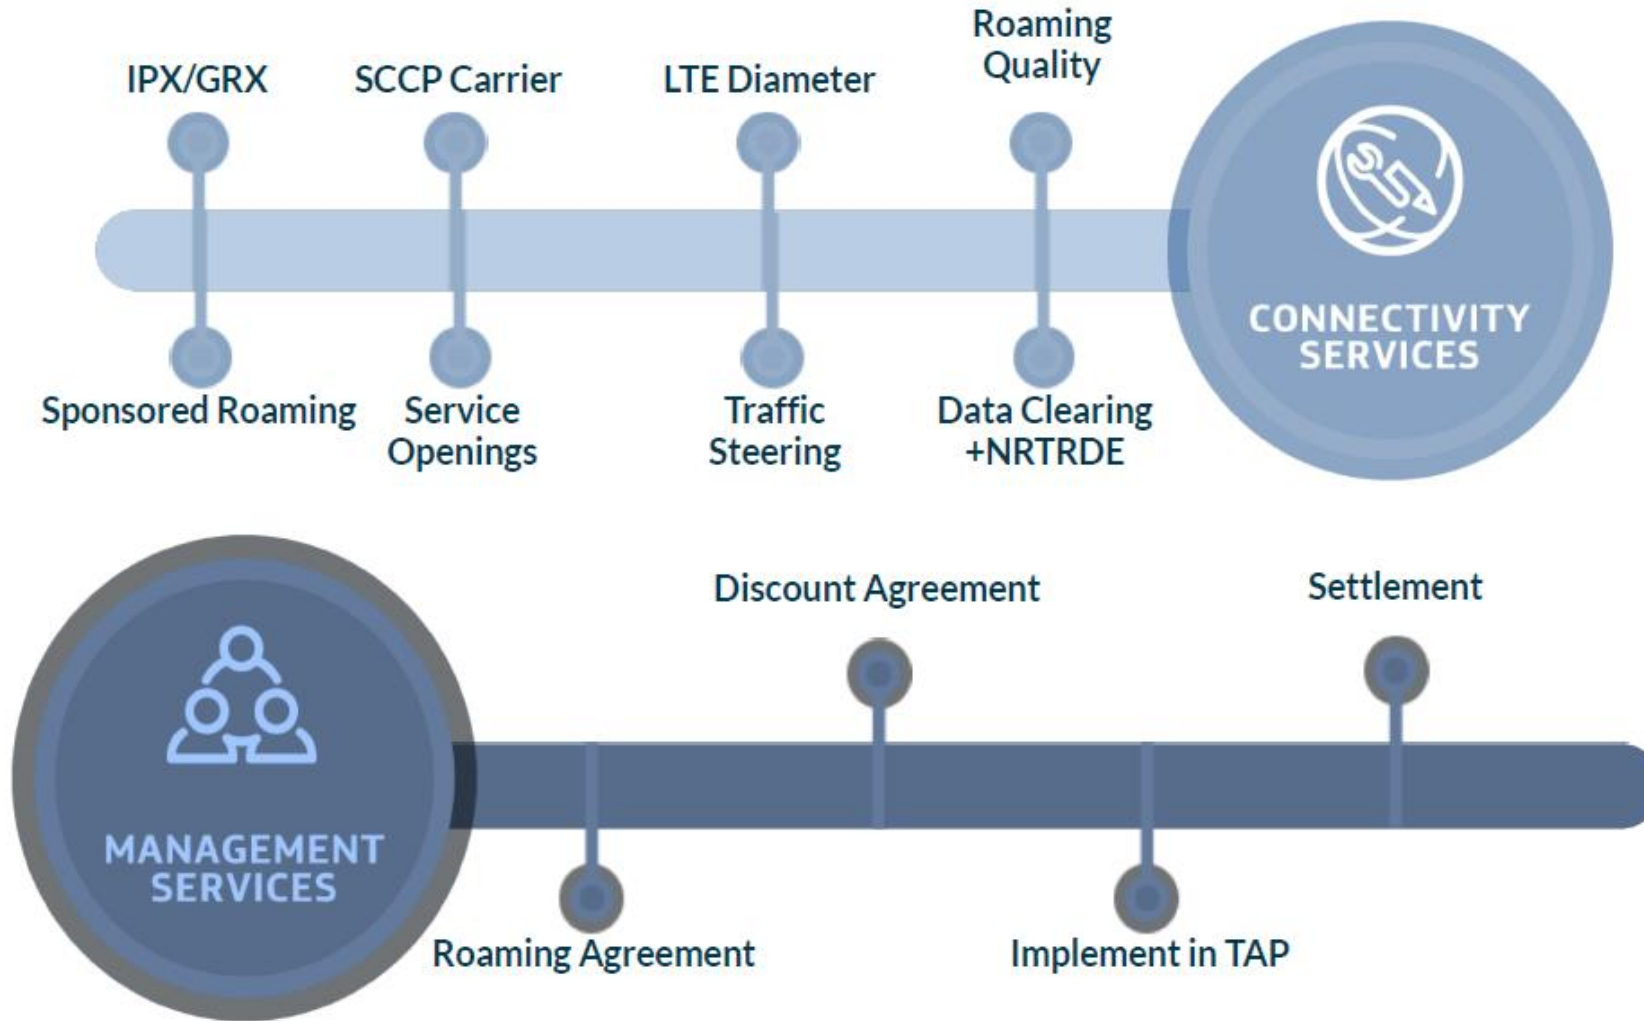

**Gotek's virtualized infrastructure allows for Geo located Point of Presence (POP) to lower latency, improve data speeds and ensure quality of service.**

## Flexibility offered through our virtualized core & Connectivity Hub

- ✓ Virtualized network core can be deployed on demand at required data centers to allow for traffic routing to the nearest GRX/IPX point in the region
- ✓ Multiple GGSNs provide redundancy and facilitate scalability required for vast number of connected devices
- ✓ Data traffic does not have to be routed back halfway across the world

# Connectivity Management

✓ Gotek offers MNO/MVNOs a set of global roaming services unifying connectivity & management

# Management Portal Features

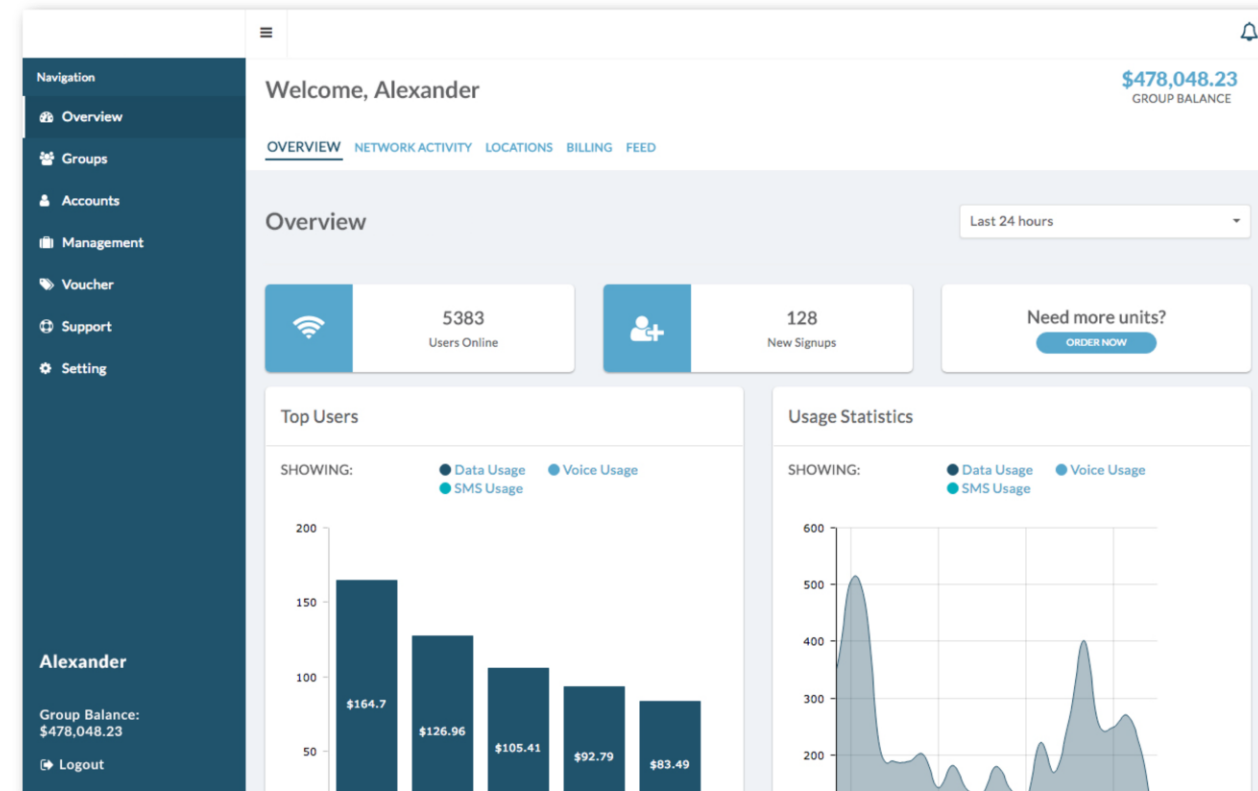

**Gotek Management Portal provides tools for MNO/MVNOs to implement cost management controls and use analytics to identify and respond to unusual device behavior in real time.**

**Real-time cost monitoring and controls help lower total cost of ownership and eliminate unexpected spend**

- ✓ Retrieve call detail record (CDR) files on a real time basis. Provides detailed statistics regarding the device with respect to connectivity sessions, usage etc
- ✓ Eliminate unpredictable spend and lower overall cost by as much as 50% with automation rules, remote diagnostics, and rate plan optimization

**Ability to optimize and switch between networks in each country based on costs**

**Easy-to-read monthly reports that present this information alongside usage statistics and summaries**

# Delivery Mechanism

**Gotek proprietary Multi-IMSI network supports different form factors based on the application requirements**

## M2M Standard SIM

- All variations of punch-out: 2FF, 3FF or 4FF
- On-demand activation (ODA) & remote Over-the-Air maintenance (OTA) supported
- Manufactured in GSMA approved facilities

## M2M Industrial SIM

- Functionality and form factor same as the Standard SIM
- Designed to survive extreme vibration, temperature, and humidity common to M2M applications
- Special smart card microcontroller used to withstand and integrate into industrial manufacturing processes

## M2M Soldered Mounted SIM

- Directly soldered onto a printed-circuit board
- Bare die, flip chip and wire bonded modules, and SMD packages
- Industrial grade – meets industrial qualification (JEDEC)

# The Future

**Gotek Telecom thrives to advance in parallel with the latest telecom technology advancements, to innovate new ideas and lead in the telecom industry**

**Some of the near future changes and upgrades (end-user frontend) include but not limited to:**

## **Direct Voice Calling**

Integration is under process to add direct voice calling with low rate international calling & High Quality GSM codecs

## **Mobile App Changes**

We are constantly upgrading Gotek Plus mobile app with new features and services, some of them are, in-app texting service, voice calls log & balance, and more !!

# Contact Us

## Got a question ?

We would love to hear from you. Get in touch with us and we'll get back to you soonest possible.
